research interests

The recent success of the *Kepler* and K2 missions, and the ongoing release of data from *Gaia* and TESS, we have access to a vast amount of astronomical data. I am interested in leveraging these data sets to make inferences of stellar physics and analysis systematics. I do this through Bayesian population studies of asteroseismic data. I have used hierarchical models to constrain the Red Clump standard candle with *Gaia* data, and my current work focuses on studying the relation between mass, age and asteroseismic rotation of solar-like stars in the *Kepler* field.
